

The segment between STH "47" and Midway Road involves designing and constructing the roadway to current standards. The existing roadway is a two lane rural cross section with gravel shoulders and ditches within an urbanized area. The pavement is failing and drainage is a problematic with frequent flooding during heavy rainfall events and spring runoff. The roadway will be designed and constructed to a two lane urban cross section with a two way left turn lane to safely accommodate turning movements. The roadway is also anticipated to incorporate bicycles and pedestrians.
