Prevent. Promote. Protect.

**Winnebago County
Health Department**

Winnebago County Health Department

COVID-19 Weekly Data Summary

February 10, 2022

Cases are declining but your risk of exposure remains very high. Vaccination is the best protection for you, your family, friends and co-workers.

Summary

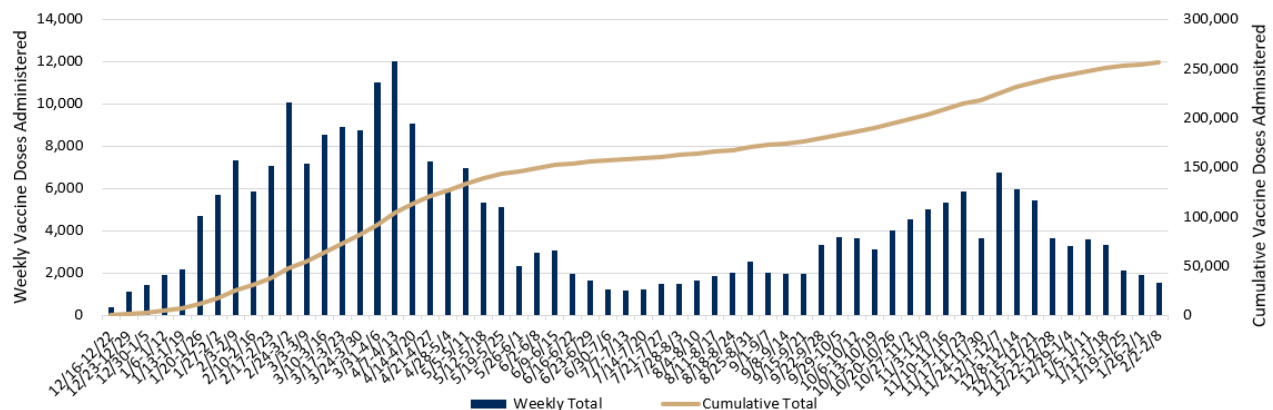

- COVID-19 case activity in Winnebago County and across the state has declined following the Omicron peak, but the level of spread remains critically high and hospitals continue to be under stress. Precautionary measures such as wearing a [mask](#), getting [vaccinated](#) and getting [tested](#) are still needed to prevent hospitalizations, deaths and further spread of the virus.
- Situational Awareness:
 - Winnebago County is at a **critically high** burden status and activity level. Although we are seeing a decrease in cases, we are likely to remain at a high level of cases for the weeks to come. If you are at high risk of complications from COVID-19, remain cautious at this time.
 - Over the past 14 days, the case rate reached 1,248.8 confirmed + probable cases per 100,000 people, which is a 47% decrease from the 2,338.2 confirmed + probable cases reported in last week's report.
 - There are currently 84 [COVID-19 patients hospitalized](#) in Fox Valley Area hospitals.
 - 31% of Winnebago County residents have received a COVID-19 booster dose and are considered "[up to date](#)" on their vaccination.
 - If you test positive for COVID-19, you might receive a [text message](#), recorded phone call and/or email from the Winnebago County Health Department. We are asking [people that test positive](#) for COVID-19 to [reach out to all close contacts](#) themselves. Please reference [our website](#) for guidance following a positive test result or exposure to COVID-19.
- If you or a member of your household tested positive for COVID-19, have symptoms or were exposed, please follow [current isolation and quarantine guidance](#) to help prevent spread of the virus. Also, be sure to notify your workplace, school or daycare. High risk settings may have additional guidelines.
- [Unvaccinated people](#) account for the vast majority of severe cases, hospitalizations (over 90%) and deaths from COVID-19. [Vaccines](#) are proven to reduce the risk of severe illness due to COVID-19 and protect the people around you. COVID-19 vaccines are free, do not require an ID or insurance, and are available for anyone five years and older. Visit www.wcvaccine.org for answers to your questions and to find a vaccination site near you.
- DHS recommends a Pfizer or Moderna [booster dose at 5 months](#) for everyone 12 years of age and older and also recommends an additional primary dose for certain immune compromised children 5- to 11- years-old.
- [CDC recommends](#) people receive an mRNA COVID-19 vaccine (Pfizer or Moderna) over Johnson & Johnson's COVID-19 vaccine, when possible and appropriate.
- To keep [kids safe and in school](#), get your child vaccinated, have your child wear a well-fitting mask, stay home when ill, and get [tested](#) if they have symptoms or were exposed to COVID-19. If your child is ill or has been exposed to COVID-19, keep all other children in your household home too.
- COVID-19 testing remains an important tool in reducing spread of the virus. Whether you are vaccinated or unvaccinated, protect others by isolating if infected and get a COVID-19 test if you have symptoms, were exposed to the virus, or feel you need a test. Even if you have no symptoms or mild ones, you can infect others.
 - If you were [exposed to COVID-19](#), wait 5 days from exposure to get tested. Get tested immediately if you have symptoms. Find additional quarantine and testing guidance on our website.
 - [Visit our website](#) for a list of testing locations in Winnebago County.
 - [Sunnyview Expo Center](#) PCR test results currently take 24 to 36 hours, with most results in 24 hours.

COVID-19 Vaccination Data

As of 2/9/2022, **6,996,855 doses** of the [COVID-19 vaccine](#) have been administered to Wisconsin residents with 63.5% of the Wisconsin population having received at least one dose of the COVID-19 vaccine and 59.7% of the Wisconsin population have completed the vaccine series.

As of 2/9/2022, **257,000 doses** of [COVID-19 vaccine](#) have been administered to Winnebago County residents with 62.2% of the county population having received at least one dose of the COVID-19 vaccine and 60.9% of the county population have completed the vaccine series. Of Winnebago County residents aged 5 or older, 65.8% have received at least one dose of the COVID-19 vaccine. Since August 12, 2021, over 53,000 3rd doses/booster doses have been administered to Winnebago County residents. Since November 7, 2021 over 4,200 first doses have been administered to children ages 5 to 11.

Cumulative and Weekly Number of COVID-19 Vaccine
Doses Administered to Winnebago County Residents
(12/16/2020-2/8/2022)

This table shows the number and percent of Winnebago County residents who have received at least one dose of the COVID-19 vaccine by demographic breakdown. Data will differ slightly from what is posted on the [DHS website](#) due to differences in population estimates used and because the data is extracted at a different time of day.

		Number	Percent	Population*			Number	Percent	Population*
Ethnicity	Hispanic or Latino	3,777	53.8%	7,017	Sex	Female	55,866	66.1%	84,556
	Not Hispanic or Latino	99,723	61.0%	163,394		Male	49,884	58.1%	85,855
	Unknown	2,422				Unknown	172		
Race	American Indian or Alaska Native	617	61.1%	1,010	Age Group	5-11	4,166	30.6%	13,635
	Asian	3,616	76.2%	4,748		12-15	4,396	55.1%	7,974
	Black or African-American	1,774	45.8%	3,874		16-17	2,338	57.0%	4,103
	Native Hawaiian or Other Pacific Islander	126	97.7%	129		18-24	8,788	42.9%	20,491
	Other Race	7,344	99.9%**	4,291		25-34	13,495	60.1%	22,442
	White	89,758	57.4%	156,359		35-44	14,303	71.0%	20,144
	Unknown	2,687				45-54	14,470	64.6%	22,390
						55-64	18,376	80.4%	22,846
						65-74	15,206	99.9%**	15,050
						75+	10,384	86.8%	11,964
						5+	105,922	65.8%	161,039

*Age Group Population Data comes from the [2019 census](#). Population sizes used in this table are for all of Winnebago County, not just the jurisdiction of Winnebago County Health Department. Population sizes will differ from population sizes used elsewhere in these reports.

** The metric for percent of population vaccinated has been capped at 99.9%. These metrics could be greater than 99.9% for multiple reasons, such as census denominator data not including all individuals that currently reside in the jurisdiction, differences in racial category classification, etc.

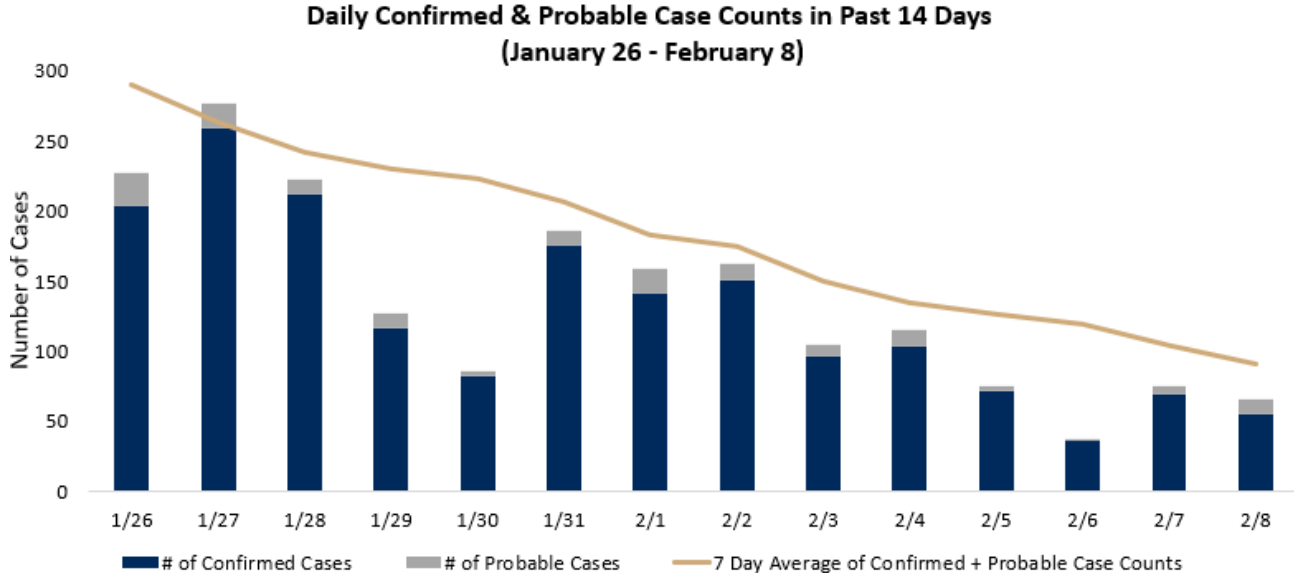

Reported Case Counts

	Case Counts for the Past 14 Days 01/26/2022-02/08/2022	Cumulative Case Counts 03/09/2020-02/09/2022
Confirmed Cases	1,773	37,058
Active Cases		1,573 (4% of cumulative cases)
Recovered Cases		35,234 (95% of cumulative cases)
Probable Cases	147	6,558
Negative Cases	3,185	127,221
Deaths**	7	290
Among Confirmed Cases	5	251
Among Probable Cases	2	39

**Death certificate must list COVID-19 (or the virus causing COVID-19) as a cause of death or a significant condition contributing to death. Healthcare providers and/or coroner determines cause of death. Data includes COVID deaths among PCR confirmed cases and probable cases.

Case Count by Day – Last 2 Weeks

When there is adequate testing in place, trending daily case counts show if the disease is spreading or shrinking and the overall burden of disease in our area. This graph shows the number of confirmed cases by test result date and probable cases by the date their case file was created. **There was an average of 137.1 confirmed and probable cases per day, which is a decrease from the 256.8 confirmed and probable cases per day last week. Total daily confirmed and probable case counts ranged from 37 to 277 cases.** There was an average of 126.6 confirmed cases per day, which is a decrease from the 236.3 cases per day last week. There was an average of 10.5 probable cases per day, which is a decrease from the 20.5 probable cases per day last week. The trend line shows the 7-day average for the combined total of confirmed and probable cases. For a full disease curve, see the [dashboard](#) on our [website](#).

Daily confirmed case counts presented here may differ from our situation update and the cases by day graph reported on our dashboard. This chart reflects the test result date instead of the date when the results are actually received by the health department.

A person is counted as a confirmed COVID-19 case if they had a positive test result using a confirmatory diagnostic test that detects the genetic material of SARS-CoV-2, the virus that causes COVID-19 (polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAAT)). Reasons a person could be counted as a probable case include: a positive antigen test or diagnosis due to symptoms and known exposure to COVID-19.

Burden Status

Burden status is the total number of reported cases per 100,000 residents in the last two weeks.

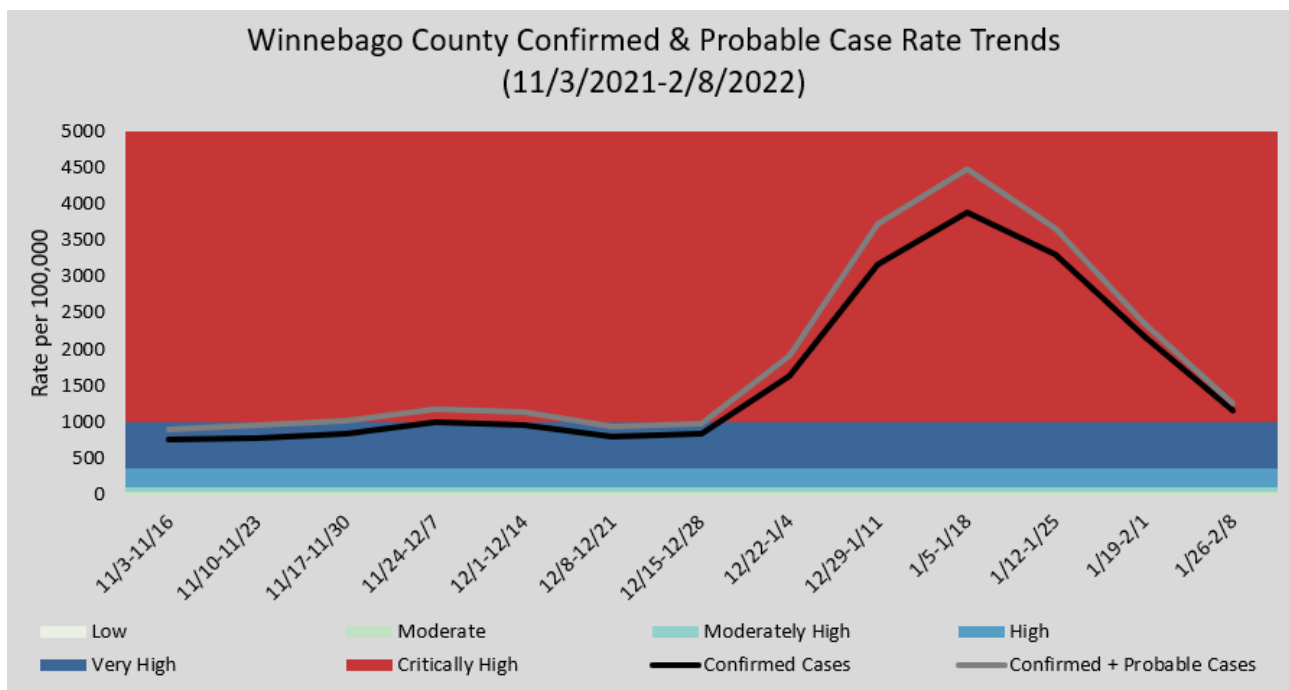

Dates	Confirmed Cases	Probable Cases	Total (Confirmed + Probable)
01/26/22-02/01/22	1,189	96	1,285
02/02/22-02/08/22	584	51	635
Total for last two weeks	1,773	147	1,920
Case rates for last two weeks (per 100,000 population)	1,153.2	95.6	1,248.8

Burden Status	Case Rate per 100,000 residents in the past two weeks	Number of Cases in the past two weeks
Low	Case rate is less than or equal to 10.	Less than 15 cases or about 1 case per day.
Moderate	Case rate is greater than 10, but less than or equal to 50.	Greater than 15 cases, but less than or equal to 77 cases or less than 6 cases per day.
Moderately High	Case rate is greater than 50, but less than or equal to 100.	Greater than 77 cases, but less than or equal to 154 cases.
High	Case rate is greater than 100, but less than or equal to 350.	Greater than 154 cases, but less than or equal to 538 cases.
Very High	Case rate is greater than 350, but less than or equal to 1,000.	Greater than 538 cases, but less than or equal to 1,537 cases.
Critically High	Case rate is greater than 1,000.	Greater than 1,537 cases.

Case rate is determined by number of new confirmed cases in a particular group (such as an age group) during the past two weeks, divided by the population of that particular group, multiplied by 100,000. View the [DHS COVID Local Activity Level](#) page to learn more about burden status.

Biweekly Confirmed & Probable Case Rate Trends

The graphs below show confirmed case rate per 100,000 people and the confirmed + probable case rate per 100,000 people for the Winnebago County Health Department Jurisdiction. These case rates are based on confirmed and probable case counts during a two-week time span.

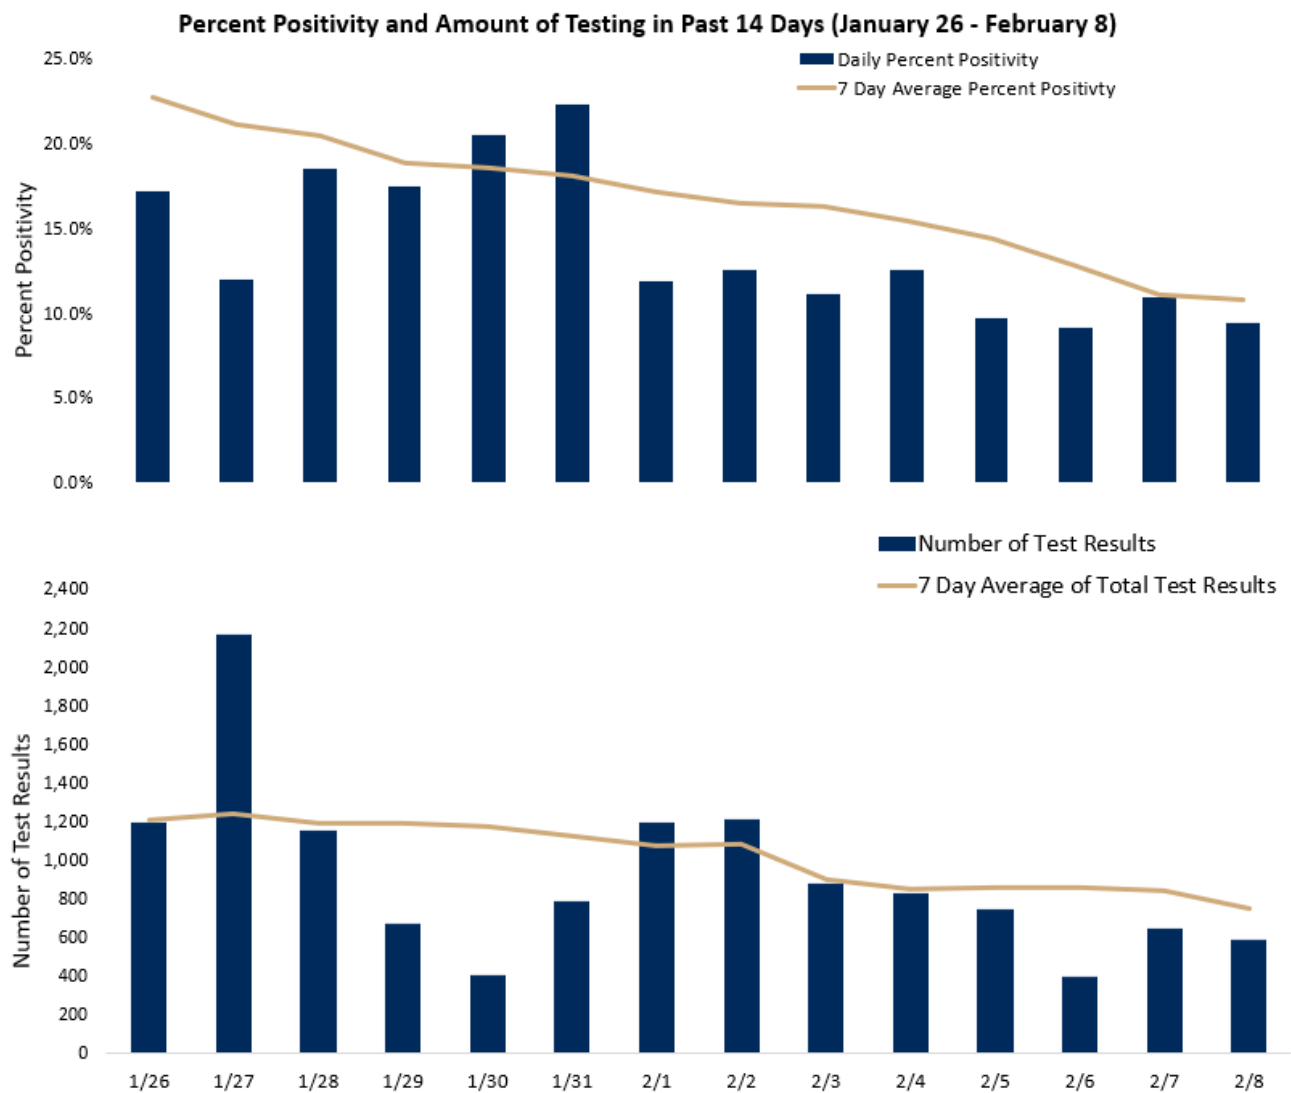

Amount of Testing and Percent Positivity

Adequate testing capacity and utilization are necessary for identification of active infections of COVID-19, and investigations into those positive cases helps prevent the spread of the virus. Higher disease activity requires more testing to identify and isolate enough infected people to slow the spread. The percent positivity helps determine if there is adequate testing. A high percent positivity may indicate an inadequate amount of testing, which limits the number of identified cases and subsequent contact tracing used to help reduce the spread of the virus. Our current goal is to have enough testing to keep the percent positivity below 5%. View the [DHS COVID Local Activity Level](#) page to see percent positivity for the state, counties, and regions.

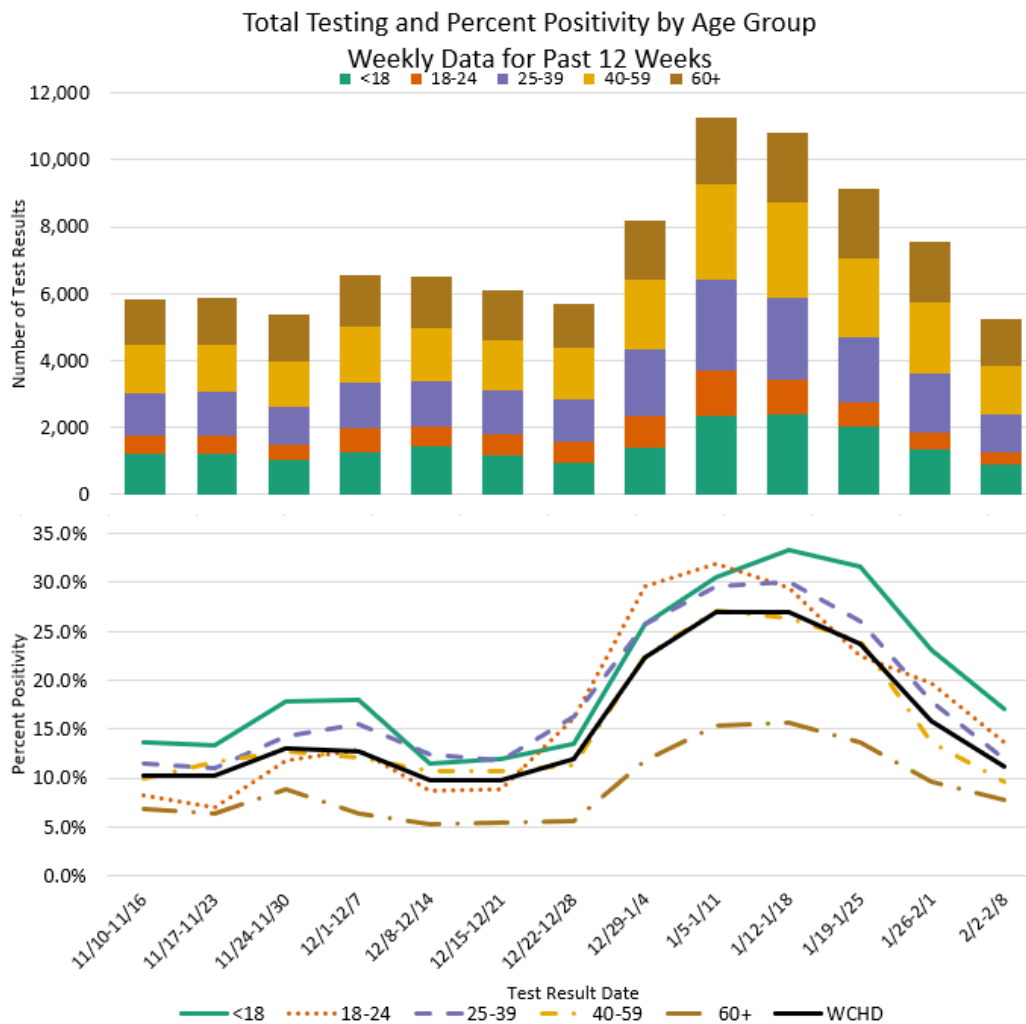

Over the past two weeks, **13.8% of PCR tests were positive**, which is a decrease from the 20.4% positivity last week. Over the past two weeks an **average of 914 PCR tests** were conducted each day among residents within the Winnebago County Health Department jurisdiction, which is a decrease from the 1,158 PCR tests last week. Antigen tests are not included in the testing numbers or the percent positivity calculation.

[Testing](#) is available at the [regional COVID-19 testing site](#) at Sunnyview Expo Center in Oshkosh as well as other locations including [CVS pharmacies](#) and community test sites.

Amount of Testing and Percent Positivity by Age Group

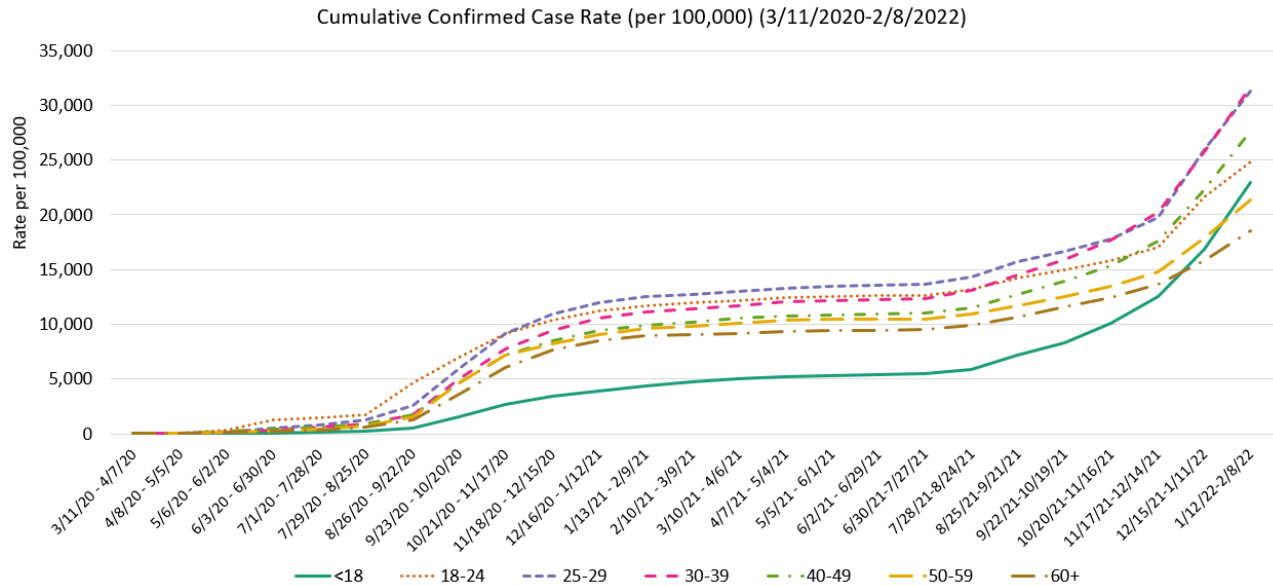

The figures below show the percent positivity and total testing numbers by age group. Antigen tests are not included in the testing numbers or the percent positivity calculation. A PCR confirmed case is only counted once in the percent positivity calculation, meaning a person with multiple positive PCR tests only counts as one confirmed case. Over the past week, individuals aged <18 had a 17.0% positivity rate. Over the past week, **11.1% of PCR tests were positive** in our jurisdiction, which is a decrease from the 16.2% positivity reported for the previous week (1/26-2/1).

02/02/22-02/08/22	<18	18-24	25-39	40-59	60+	Total
Percent Positivity	17.0%	13.6%	11.9%	9.6%	7.7%	11.1%
Testing Rates per 100,000 population	2,871	1,879	3,897	3,538	4,376	3,443
Number of Tests	888	359	1,146	1,454	1,416	5,264
Population	30,928	19,108	29,405	41,095	32,359	152,895

Trending by Age Group

This graph shows how cumulative confirmed case rates by age group have changed over time. Cumulative case rates will always trend upward; it is the rate of increase in that trend that helps us understand what populations are being impacted the most.

This table shows the case count and case rate by age group for the past two weeks and cumulatively.

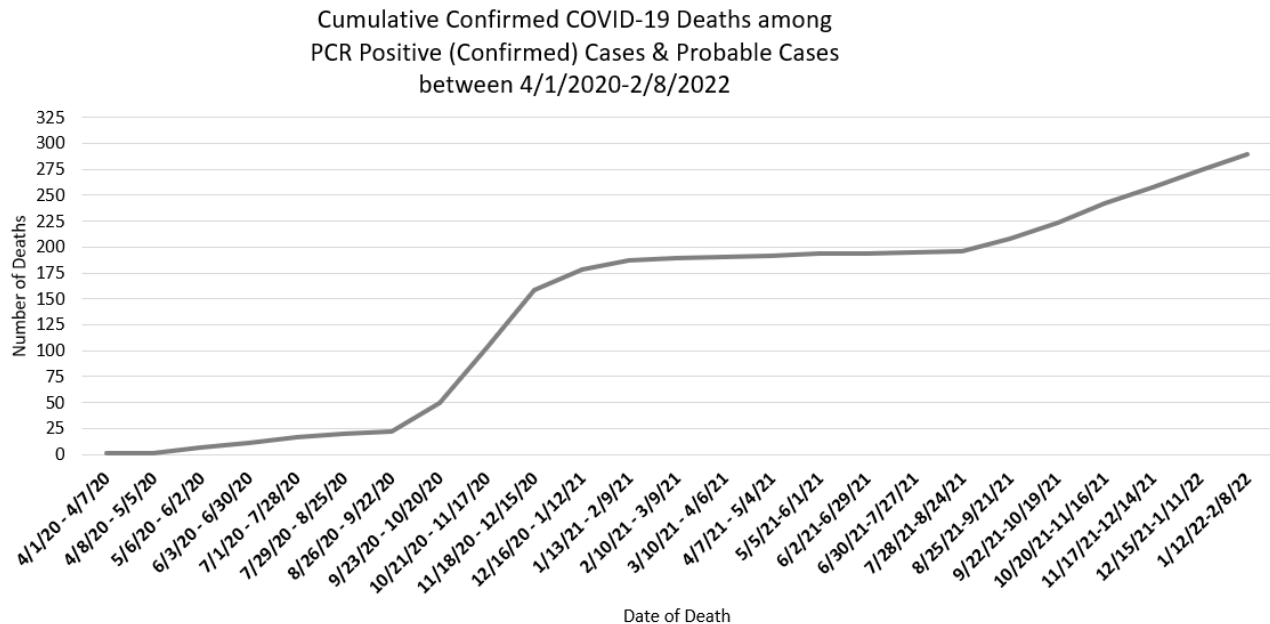

Age Group	Past Two Weeks (01/26/22-02/08/22)		Cumulative PCR Confirmed Case Count	Population***
	PCR Confirmed Case Count	Case Rate (per 100,000)		
<5	106	1,278.2	1,176	8,293
5-9	140	1,695.7	2,038	8,256
10-14	146	1,632.4	2,362	8,944
15-17	66	1,214.4	1,525	5,435
18-24	150	785.0	4,747	19,108
25-29	131	1,292.9	3,174	10,132
30-39	322	1,670.7	6,113	19,273
40-49	221	1,209.7	5,047	18,269
50-59	207	906.9	4,873	22,826
60+	284	877.7	6,000	32,359

***Age Group Population Data comes from the [2018 census](#). Total Population size across all age groups (152,895) differs slightly from total population size used to calculate Winnebago County Health Department jurisdiction case rate (153,748) which was determined using 2020 population data from the WI Department of Administration.

Confirmed COVID-19 Deaths

Confirmed COVID-19 deaths include deaths among PCR confirmed cases and probable cases. Confirmed COVID-19 deaths have a death certificate that lists COVID-19 disease or SARS-CoV-2 as a cause of death or a significant condition contributing to death. Healthcare providers or medical examiners/coroners determine cause of death. Public reporting of COVID-19 deaths lag while waiting for confirmation.

In the graph below, the data for recent weeks is preliminary and subject to change. Recent deaths are still pending as we await confirmation on cause of death.

These tables show case counts for confirmed COVID-19 deaths by age group and housing type, as well as by ethnicity, race, and sex.

All Confirmed COVID-19 Deaths by Age Group and Housing Type					
Age Group	Not Group	LTCF/ Group	Total Deaths	Rate per 100,000	Population
<50	15	1	16	16.4	97,710
50-59	31	1	32	140.2	22,826
60-69	37	8	45	272.9	16,491
70-79	43	20	63	656.7	9,594
80-89	48	38	86	2,135.8	6,274
90+	15	33	48		
Total	189	101	290	189.7	152,895

All Confirmed COVID-19 Deaths by Ethnicity, Race, and Sex		
Ethnicity	Hispanic/Latino or Unknown	26
	Not Hispanic/Latino	264
Race	Other or Unknown	23
	White	267
Sex	Female	120
	Male	170

Long-term care facility (LTCF): nursing homes, assisted living facilities

Group housing facility: Group housing facilities include city and county jails, homeless shelters, dormitories and group homes. Deaths among those living in Wisconsin Department of Corrections facilities (including Oshkosh Correctional Institute) are not included here.

Not group housing facility: single family homes, apartments, condos, duplexes or townhouses

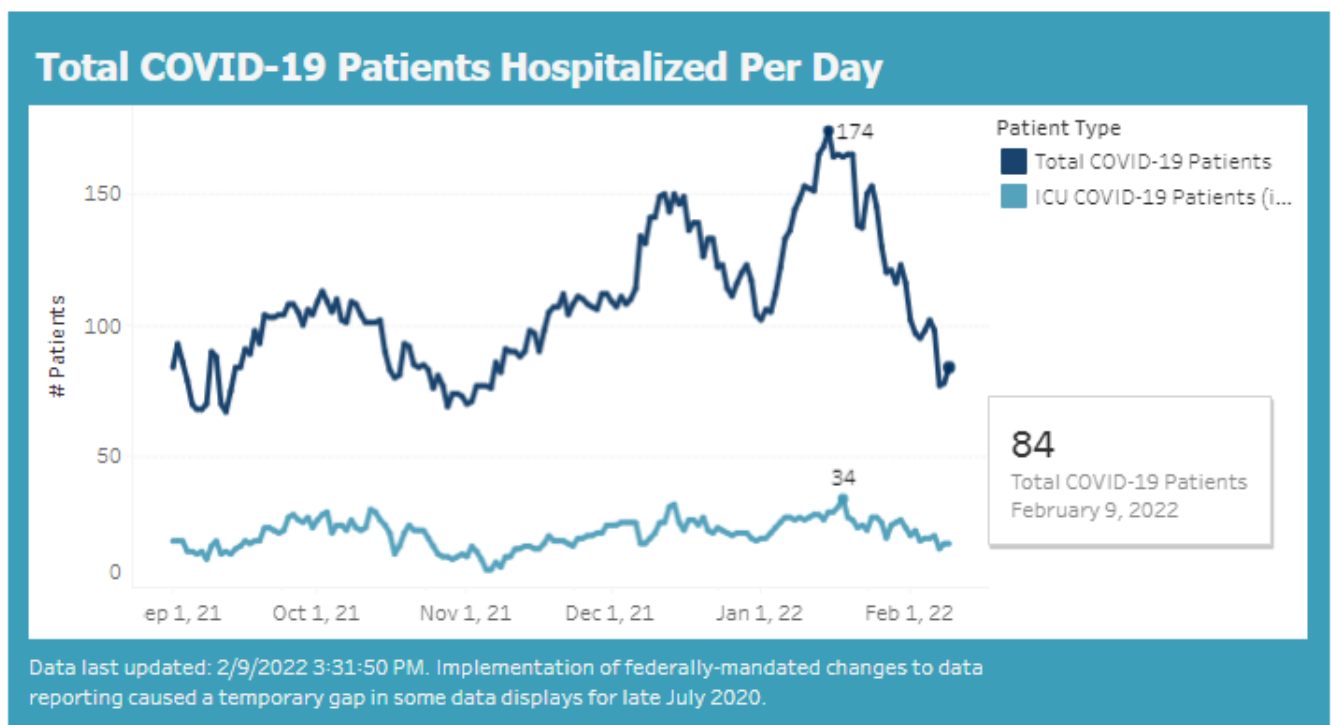

Healthcare Measures for the Fox Valley Area

The Fox Valley Area HERC Region includes Calumet, Green Lake, Menominee, Outagamie, Shawano, Waupaca, Waushara and Winnebago Counties.

It is vital that healthcare systems have adequate capacity to manage patient care in the context of a surge caused by COVID-19. Through adequate testing, case identification and investigation we can help keep case counts at levels that are manageable by our healthcare systems. When healthcare systems exceed their capacity, the ability to treat severe illness is compromised and patients do worse and/or do not get the care they need to survive the illness.

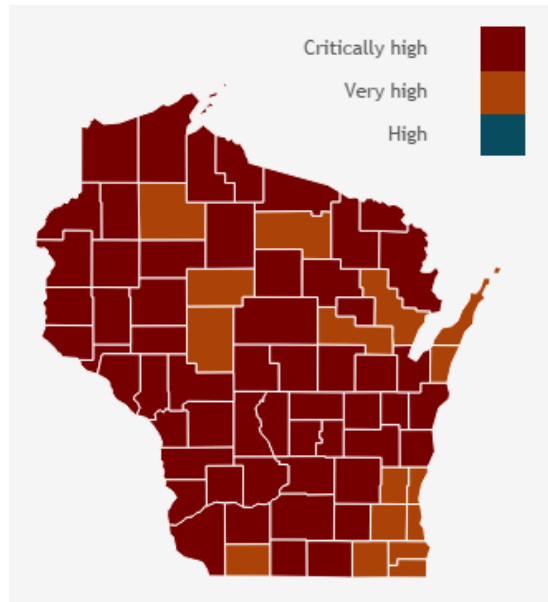

As of 02/09/2022, there were **84 COVID-19 patients hospitalized** in the Fox Valley Area hospitals with 17 of those patients in the ICU.

To view more information on healthcare measures in the Fox Valley Area and across the state, please visit <https://www.wha.org/COVID19Update> and <https://www.dhs.wisconsin.gov/covid-19/hosp-data.htm>

Burden, Trajectory, and Activity Level Across Wisconsin in Past 14 Days

Updated 02/09/2022

The Wisconsin Department of Health Services classifies regions and counties as critically high, very high, high, medium, or low activity levels for COVID-19 spread by combining the case burden (case rate) and trajectory (change in cases over time) indicators. The state updates this information weekly on Wednesdays by 5 p.m. As of February 9, 2022, Winnebago County**** and the Fox Valley Region were classified as having a **critically high COVID-19 activity level**.

To view more information on these metrics, please visit <https://www.dhs.wisconsin.gov/covid-19/local.htm>

Area	Confirmed + Probable Case Count (Past 14 days)	Burden	Trajectory	Activity Level	Percent Positive (Past 7 Days)
Winnebago	2,706	1,576.6 Critically High	-56% ▼	Critically High ■	13.3%
Fox Valley Area	6,801	1,236.9 Critically High	-54% ▼	Critically High ■	11.9%
Outagamie	1,997	1,057.9 Critically High	-55% ▼	Critically High ■	10.3%
Wisconsin	63,142	1,082.6 Critically High	-44% ▼	Critically High ■	12.9%

A trajectory of N/A means there was no significant change in the percent change in cases for this week compared to the previous week.

****This data is provided by the [Department of Health Services](#) and may be different than the information provided by WCHD because the state reports data for the entire county, which includes the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#).

Background Information

This report provides *preliminary* data on confirmed COVID-19 cases from January 26, 2022 – February 8, 2022. A person is counted as a **confirmed** COVID-19 case if they had a **positive confirmatory laboratory test** (for example, polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAAT) that detect genetic material of SARS-CoV-2, the virus that causes COVID-19). Antigen positive tests are counted as **probable** cases.

Dates utilized for all graphs and tables are based on test result date and may not represent final reported case counts. Data may be underreported for recent days because results can take multiple days to be reported to the health department. This means the number of tests and percent positivity may change in next week's report. As this is a weekly report for the past 14 days, there will always be a week of overlap between reports.

*The COVID-19 data provided in this report is specific to the Winnebago County Health Department (WCHD) jurisdiction (population: 153,748). It does not include the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#). As of October 3, 2020, data reports from the Winnebago County Health Department do not include test results from residents in Wisconsin Department of Corrections facilities, which includes the Oshkosh Correctional Institute. This data can be found on the Wisconsin Department of Corrections [website](#).

Data provided on the [Department of Health Services website](#) may be different than information provided by WCHD because the state reports data for the entire county based on address, which includes those portions of Menasha and Appleton as well as the correctional facilities.
