Spotlight: Updated TB Screening Recommendations

- The CDC has updated the TB screening recommendations for healthcare personnel. [Here](#) is the article detailing the new guidelines.

2019* recommendations for tuberculosis (TB) screening and testing of U.S. health care personnel

Category	2019 Recommendation
Baseline (replacement) screening and testing	TB screening of all HCP, including a symptom evaluation and test (IGRA or TST) for those without documented prior TB disease or LTBI (unchanged); individual TB risk assessment (new).
Postexposure screening and testing	Symptom evaluation for all HCP when an exposure is recognized. For HCP with a baseline negative TB test and no prior TB disease or LTBI, perform a test (IGRA or TST) when the exposure is identified. If that test is negative, do another test 8-10 weeks after the last exposure (unchanged).
Serial screening and testing for HCP without LTBI	Not routinely recommended (new); can consider for selected HCP groups (unchanged); recommend annual TB education for all HCP (new emphasis), including information about TB exposure risks for all HCP (new emphasis).
Evaluation and treatment of positive test results	Treatment is encouraged for all HCP with untreated LTBI, unless medically contraindicated (new).

Spotlight: Tick-borne Diseases

- The Winnebago County Health Department will have tick kits available. Please contact us if interested at (920) 232-3000 or health@co.winnebago.wi.us
- Diagnosing Lyme Disease: [Two-Step Testing for Lyme Disease](#)
 - Recommendation from CDC: only use laboratory tests with patients who have [symptoms](#) typical of Lyme disease to avoid misdiagnosis.
- Resources: [Tick-borne disease CDC toolkit](#); [Recommendations for Patients after a Tick Bite](#)

Spotlight: Measles

- From January 1 to July 11, 2019, 1,123** individual cases of measles have been confirmed in 28 states. Find weekly updates [here](#).
