Rates can fluctuate greatly with small population sizes like Omro and Winneconne making it difficult to call out high rates. **Small population data may be more effectively looked at in a trend wise fashion.**

## Confirmed Case Counts Among Individuals under Age 18 Trended Over Time by School District Geographic Boundary

The tables below show the biweekly confirmed cases counts by school district geographic boundary across the past 8 weeks for individuals under age 18. The highlighted cells for Neenah and Oshkosh School District Geographic Boundaries are colors associated with the burden status. Please see the table on page 4 for more information on burden status. This information is not provided for Omro and Winneconne School District Geographic Boundaries due to the small population size.

## Background Information

This report provides *preliminary* data on confirmed COVID-19 cases. A person is counted as a confirmed COVID-19 case if they had a positive confirmatory laboratory test (for example, polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAAT) that detect genetic material of SARS-CoV-2, the virus that causes COVID-19). Antigen positive tests are counted as probable cases.

Data by school district geographic boundary may differ from data provided by the respective school district. School district geographic boundaries are the geographic area from which children are eligible to attend a certain school district. Data by school district geographic boundary includes cases among all individuals that live within that boundary regardless of age or where they attend school. In this report, data for school age children (5-17) does not differentiate between where they actually attend school or if they are homeschooled.
