

Public Health
Prevent. Promote. Protect.

**Winnebago County
Health Department**

Winnebago County Health Department COVID-19 Weekly Data Summary

August 19, 2021

Hospitalizations are rising fast. Get vaccinated & wear a mask.

Summary

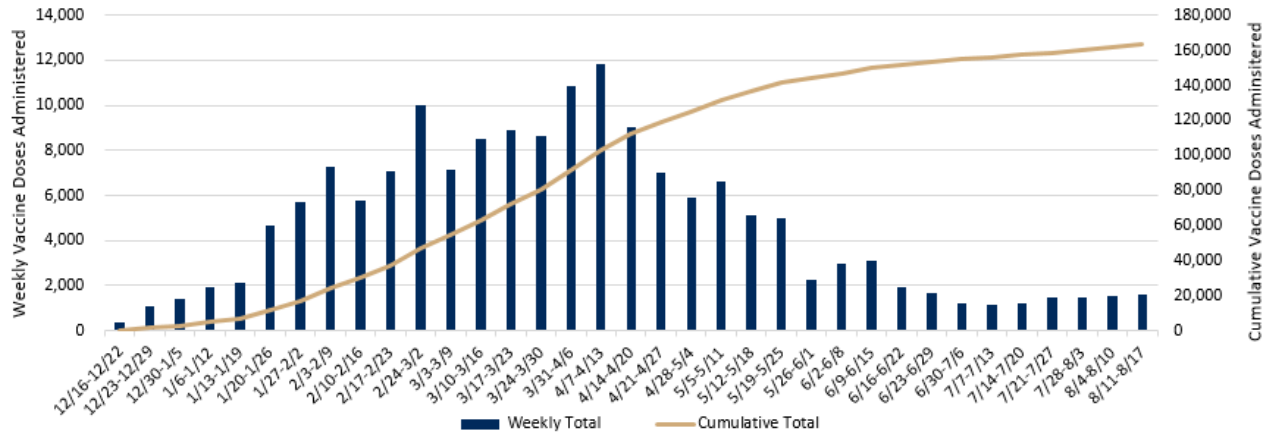

- Due to a [high level](#) of community transmission of COVID-19 in Winnebago County, **the health department strongly recommends that everyone, vaccinated and unvaccinated, wear a mask in public indoor settings and crowded outdoor venues.** Public facing establishments are urged to continue or re-instate masking and distancing indoors and masking at crowded outdoor venues. The [new county recommendations](#) are in response to recent [guidelines issued by the Centers for Disease Control and Prevention \(CDC\)](#) that recommend masking for everyone in areas with substantial and high transmission.
- Vaccination provides the best protection against the Delta variant, which is highly contagious and is spreading rapidly among people who haven't gotten vaccinated. We are making progress but not enough people are vaccinated to prevent this wave of new cases that are resulting in more severe COVID-19 symptoms, preventable hospitalizations and premature death among the unvaccinated. Communities that are experiencing higher rates of infection today are the ones with lower vaccination rates. If you are unvaccinated, continue to wear a mask, social distance and [make a plan to get vaccinated](#). If you are vaccinated, you still may bring this Delta variant home to unvaccinated or immune suppressed family and friends. Protect yourself, family and friends by [encouraging vaccination](#) and wearing a mask.
- Situational Awareness
 - Over the past two weeks, we have reported a total of 464 confirmed + probable cases, a **26% increase** compared to the 367 confirmed + probable cases reported in last week's report.
 - The confirmed + probable case burden is **high** for our jurisdiction. The confirmed + probable case rate over the past 2 weeks for our jurisdiction is **301.8 cases per 100,000 people**, an increase from the 238.7 cases per 100,000 reported in last week's report.
 - There are at least 503 PCR tests being performed every day in our jurisdiction and this is trending upwards.
 - Over the past two weeks, 5.1% of PCR tests were positive in our jurisdiction. The percent positivity has continued to increase each week since our lowest point in mid-June.
 - There are currently [53 COVID-19 patients hospitalized](#) in Fox Valley Area hospitals.
- Current COVID-19 activity level is indicated as **high** for Winnebago County based on a high burden status over the past two weeks. **As long as the virus is still circulating, children under the age of 12 and all other unvaccinated individuals are at a higher risk of getting COVID-19.**
- Vaccines are available any day of the week at a [site near you](#). A [regional COVID-19 vaccine tour](#) is occurring throughout the summer with vaccine clinics being held in Winnebago, Calumet and Outagamie counties. Visit www.wcvaccine.org to find answers to your questions about the vaccine and see where you can get vaccinated.
 - 60.0% of Winnebago County residents aged 12 or older have received at least one dose of the COVID-19 vaccine.
 - Everyone [12 and older](#) is eligible to receive the COVID-19 vaccine. *Pfizer is the only vaccine currently approved for 12- to 17-year olds. Check [vaccine locations](#) before you go if you need or want a specific vaccine brand.*
- COVID-19 testing remains an important tool in reducing spread of the virus to others. Whether you are vaccinated or unvaccinated, get a COVID-19 test if you have symptoms, were exposed to the virus, or feel you need a test. Knowing helps you protect others. Even mild symptoms can infect others.
 - The CDC encourages widespread testing to identify asymptomatic cases to avoid the spread of COVID-19.
 - [Sunnyview Expo Center](#) PCR test results have a quick turnaround. [Visit our website](#) for a full list of testing locations in Winnebago County.

COVID-19 Vaccination Data

As of 8/18/2021, **5,830,342 doses** of the [COVID-19 vaccine](#) have been administered to Wisconsin residents with 53.5% of the Wisconsin population having received at least one dose of the COVID-19 vaccine and 50.3% of the Wisconsin population have completed the vaccine series.

As of 8/18/2021, **164,989 doses** of [COVID-19 vaccine](#) have been administered to Winnebago County residents with 51.9% of the county population having received at least one dose of the COVID-19 vaccine and 49.0% of the county population have completed the vaccine series. Of Winnebago County residents aged 12 or older, 60.0% have received at least one dose of the COVID-19 vaccine.

Cumulative and Weekly Number of COVID-19 Vaccine Doses Administered to Winnebago County Residents (12/16/2020-8/17/2021)

This table shows the number and percent of Winnebago County residents who have received at least one dose of the COVID-19 vaccine by demographic breakdown. Data will differ slightly from what is posted on the [DHS website](#) due to differences in population estimates used and because the data is extracted at a different time of day.

		Number	Percent	Population*			Number	Percent	Population*
Ethnicity	Hispanic or Latino	2,669	38.0%	7,017	Sex	Female	47,141	55.8%	84,556
	Not Hispanic or Latino	82,917	50.7%	163,394		Male	41,019	47.8%	85,855
	Unknown	2,797				Unknown	223		
Race	American Indian or Alaska Native	447	44.3%	1,010	Age Group	12-15	3,143	39.4%	7,974
	Asian	2,708	57.0%	4,748		16-17	1,912	46.6%	4,103
	Black or African-American	1,150	29.7%	3,874		18-24	6,647	32.4%	20,491
	Native Hawaiian or Other Pacific Islander	99	76.7%	129		25-34	10,764	48.0%	22,442
	Other Race	3,451	80.4%	4,291		35-44	11,974	59.4%	20,144
	White	76,979	49.2%	156,359		45-54	12,657	56.5%	22,390
	Unknown	3,549				55-64	16,711	73.1%	22,846
						65-74	14,362	95.4%	15,050
				75+	10,212	85.4%	11,964		

*Age Group Population Data comes from the [2019 census](#). Population sizes used in this table are for all of Winnebago County, not just the jurisdiction of Winnebago County Health Department. Population sizes will differ from population sizes used elsewhere in these reports.

Reported Case Counts

	Case Counts for the Past 14 Days 8/4/2021-8/17/2021	Cumulative Case Counts 3/9/2020-8/18/2021
Confirmed Cases	360	15,859
Active Cases		324 (2% of cumulative cases)
Recovered Cases		15,365 (97% of cumulative cases)
Probable Cases	104	3,034
Negative Cases	1,307	95,172
Deaths**	1	196
Among Confirmed Cases	1	171
Among Probable Cases	0	25

**Death certificate must list COVID-19 (or the virus causing COVID-19) as a cause of death or a significant condition contributing to death. Healthcare providers and/or coroner determines cause of death. Data includes COVID deaths among PCR confirmed cases and probable cases.

Case Count by Day – Last 2 Weeks

When there is adequate testing in place, trending daily case counts show if the disease is spreading or shrinking and the overall burden of disease in our area. This graph shows the number of confirmed cases by test result date and probable cases by the date their case file was created. **There was an average of 33.1 confirmed and probable cases per day, which is an increase from the 26.2 confirmed and probable cases per day reported last week. Total daily confirmed and probable case counts ranged from 22 to 57 cases.** There was an average of 25.7 confirmed cases per day, which is an increase from the 20.9 cases per day reported last week. There was an average of 7.4 probable cases per day, which is an increase from the 5.3 probable cases per day reported last week. The trend line shows the 7-day average for the combined total of confirmed and probable cases. For a full disease curve, see the [dashboard](#) on our [website](#).

Daily confirmed case counts presented here may differ from our situation update and the cases by day graph reported on our dashboard. This chart reflects the test [result](#) date instead of the date when the results are actually received by the health department.

A person is counted as a confirmed COVID-19 case if they had a positive test result using a confirmatory diagnostic test that detects the genetic material of SARS-CoV-2, the virus that causes COVID-19 (polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAT)). Reasons a person could be counted as a probable case include: a positive antigen test, positive antibody test, or diagnosis due to symptoms and known exposure to COVID-19.

Burden Status

Burden status is the total number of reported cases per 100,000 residents in the last two weeks.

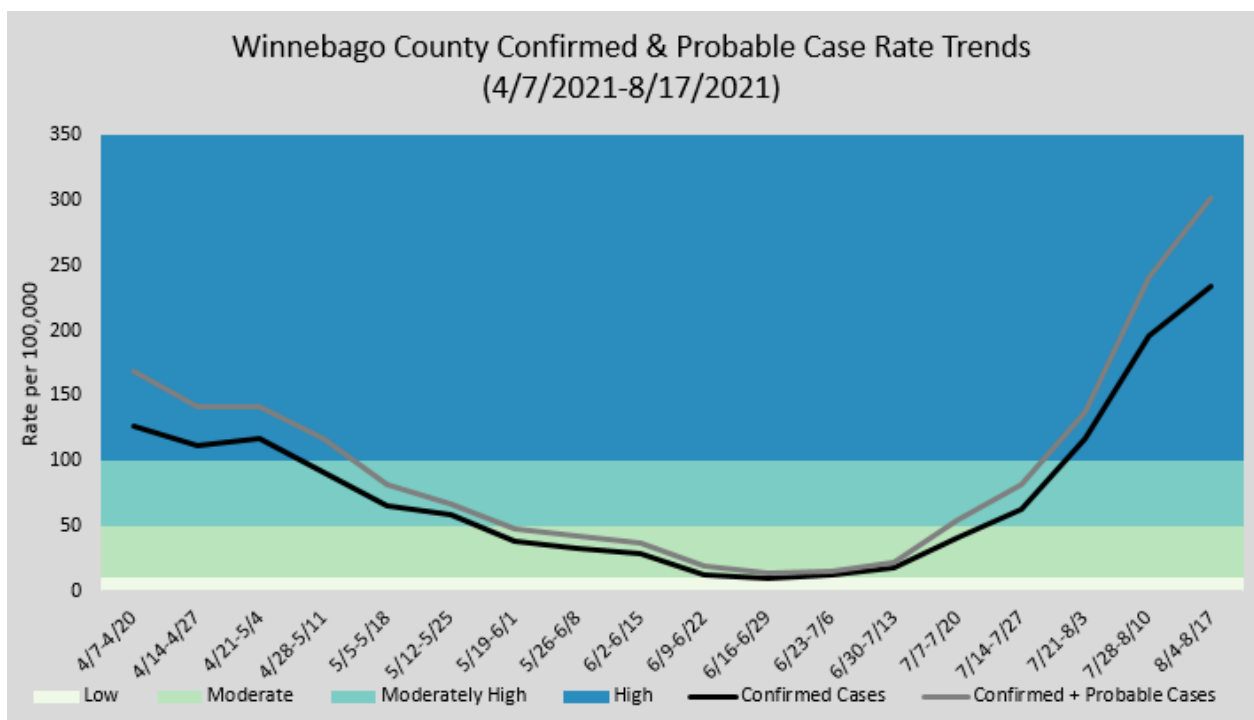

Dates	Confirmed Cases	Probable Cases	Total (Confirmed + Probable)
8/4-8/10	172	49	221
8/11-8/17	188	55	243
Total for last two weeks	360	104	464
Case rates for last two weeks (per 100,000 population)	234.1	67.6	301.8

Burden Status	Case Rate per 100,000 residents in the past two weeks	Number of Cases in the past two weeks
Low	Case rate is less than or equal to 10.	Less than 15 cases or about 1 case per day.
Moderate	Case rate is greater than 10, but less than or equal to 50.	Greater than 15 cases, but less than or equal to 77 cases or less than 6 cases per day.
Moderately High	Case rate is greater than 50, but less than or equal to 100.	Greater than 77 cases, but less than or equal to 154 cases.
High	Case rate is greater than 100, but less than or equal to 350.	Greater than 154 cases, but less than or equal to 538 cases.
Very High	Case rate is greater than 350, but less than or equal to 1,000.	Greater than 538 cases, but less than or equal to 1,537 cases.
Critically High	Case rate is greater than 1,000.	Greater than 1,537 cases.

Case rate is determined by number of new confirmed cases in a particular group (such as an age group) during the past two weeks, divided by the population of that particular group, multiplied by 100,000. View the [DHS COVID Local Activity Level](#) page to learn more about burden status.

Biweekly Confirmed & Probable Case Rate Trends

The graphs below show confirmed case rate per 100,000 people and the confirmed + probable case rate per 100,000 people for the Winnebago County Health Department Jurisdiction. These case rates are based on confirmed and probable case counts during a two-week time span.

Amount of Testing and Percent Positivity

Adequate testing capacity and utilization are necessary for identification of active infections of COVID-19, and investigations into those positive cases helps prevent the spread of the virus. Higher disease activity requires more testing to identify and isolate enough infected people to slow the spread. The percent positivity helps determine if there is adequate testing. A high percent positivity may indicate an inadequate amount of testing, which limits the number of identified cases and subsequent contact tracing used to help reduce the spread of the virus. Our current goal is to have enough testing to keep the percent positivity below 5%. View the [DHS COVID Local Activity Level](#) page to see percent positivity for the state, counties, and regions.

Over the past two weeks, **5.1% of PCR tests were positive**, which is an increase from the 4.8% positivity reported last week. Daily positivity ranged from 2.3% to 9.7%. Over the past two weeks an **average of 503 PCR tests** were conducted each day among residents within the Winnebago County Health Department jurisdiction. Antigen tests are not included in the testing numbers or the percent positivity calculation. A PCR confirmed case is only counted once in the percent positivity calculation, meaning a person with multiple positive PCR tests only counts as one confirmed case.

[Testing](#) is available at the [regional COVID-19 testing site](#) at Sunnyview Expo Center in Oshkosh as well as other locations including [CVS pharmacies](#) and multiple community test sites in [Oshkosh](#), [Neenah](#), and [Appleton](#).

Amount of Testing and Percent Positivity by Age Group

The figures below show the percent positivity and total testing numbers by age group. Antigen tests are not included in the testing numbers or the percent positivity calculation. A PCR confirmed case is only counted once in the percent positivity calculation, meaning a person with multiple positive PCR tests only counts as one confirmed case. Over the past week, individuals aged <18 had an 8.5% positivity rate and individuals aged <18 had the lowest testing rate (1,306 tests per 100,000 individuals aged <18).

8/11-8/17	<18	18-24	25-39	40-59	60+	Total
Percent Positivity	8.5%	6.6%	6.4%	4.3%	3.4%	5.3%
Testing Rates per 100,000 population	1,306	2,140	2,445	2,200	3,236	2,336
Number of Tests	423	409	767	925	1,047	3,572
Population	30,928	19,108	29,405	41,095	32,359	152,895

Trending by Age Group

This graph shows how cumulative confirmed case rates by age group have changed over time. Cumulative case rates will always trend upward; it is the rate of increase in that trend that helps us understand what populations are being impacted the most.

This table shows the case count and case rate by age group for the past two weeks and cumulatively.

Age Group	Past Two Weeks (8/4/21-8/17/21)		Cumulative Confirmed Case Count	Population***
	Case Count	Case Rate (per 100,000)		
<18	61	197.2	1,770	30,928
18-24	55	287.8	2,492	19,108
25-29	27	266.5	1,422	10,132
30-39	67	347.6	2,478	19,273
40-49	49	268.2	2,078	18,269
50-59	44	192.8	2,458	22,826
60+	57	176.1	3,153	32,359

***Age Group Population Data comes from the [2018 census](#). Total Population size across all age groups (152,895) differs slightly from total population size used to calculate Winnebago County Health Department jurisdiction case rate (153,748) which was determined using 2020 population data from the [WI Department of Administration](#).

Confirmed COVID-19 Deaths

Confirmed COVID-19 deaths include deaths among PCR confirmed cases and probable cases. Confirmed COVID-19 deaths have a death certificate that lists COVID-19 disease or SARS-CoV-2 as a cause of death or a significant condition contributing to death. Healthcare providers or medical examiners/coroners determine cause of death. Public reporting of COVID-19 deaths lag while waiting for confirmation.

In the graph below, the data for recent weeks is preliminary and subject to change. Recent deaths are still pending as we await confirmation on cause of death.

These tables show case counts for confirmed COVID-19 deaths by age group and housing type, as well as by ethnicity, race, and sex.

All Confirmed COVID-19 Deaths by Age Group and Housing Type					
Age Group	Not Group	LTCF/ Group	Total Deaths	Rate per 100,00	Population
<60	20	1	21	17.4	120,536
60-69	22	7	29	175.9	16,491
70-79	30	14	44	458.6	9,594
80-89	34	31	65	1,625.8	6,274
90+	9	28	37		
Total	115	81	196	128.2	152,895

All Confirmed COVID-19 Deaths by Ethnicity, Race, and Sex		
Ethnicity	Hispanic/Latino or Unknown	12
	Not Hispanic/Latino	184
Race	Other or Unknown	14
	White	182
Sex	Female	78
	Male	118

Long-term care facility (LTCF): nursing homes, assisted living facilities

Group housing facility: Group housing facilities include city and county jails, homeless shelters, dormitories and group homes. Deaths among those living in Wisconsin Department of Corrections facilities (including Oshkosh Correctional Institute) are not included here.

Not group housing facility: single family homes, apartments, condos, duplexes or townhouses

Healthcare Measures for the Fox Valley Area

The Fox Valley Area HERC Region includes Calumet, Green Lake, Menominee, Outagamie, Shawano, Waupaca, Waushara and Winnebago Counties.

It is vital that healthcare systems have adequate capacity to manage patient care in the context of a surge caused by COVID-19. Through adequate testing, case identification and investigation we can help keep case counts at levels that are manageable by our healthcare systems. When healthcare systems exceed their capacity, the ability to treat severe illness is compromised and patients do worse and/or do not get the care they need to survive the illness.

As of 8/18/2021, there were **53 COVID-19 patients hospitalized** in the Fox Valley Area hospitals with 9 of those patients in the ICU.

To view more information on healthcare measures in the Fox Valley Area and across the state, please visit <https://www.wha.org/COVID19Update> and <https://www.dhs.wisconsin.gov/covid-19/hosp-data.htm>

Burden, Trajectory, and Activity Level Across Wisconsin in Past 14 Days

Updated 8/18/2021

The Wisconsin Department of Health Services classifies regions and counties as critically high, very high, high, medium, or low activity levels for COVID-19 spread by combining the case burden (case rate) and trajectory (change in cases over time) indicators. The state updates this information weekly on Wednesdays by 5 p.m. As of August 18, 2021, Winnebago County**** and the Fox Valley Region were classified as having a **high COVID-19 activity level**.

To view more information on these metrics, please visit <https://www.dhs.wisconsin.gov/covid-19/local.htm>

Area	Confirmed + Probable Case Count (Past 14 days)	Burden	Trajectory	Activity Level	Percent Positive (Past 7 Days)
Winnebago	528	311.8 High	29% ▲	High ■	5.6%
Fox Valley Area	1,636	300.0 High	44% ▲	High ■	6.3%
Outagamie	560	304.7 High	65% ▲	High ■	7.0%
Wisconsin	18,954	327.9 High	13% ▲	High ■	7.1%

A trajectory of N/A means there was no significant change in the percent change in cases for this week compared to the previous week.

****This data is provided by the [Department of Health Services](#) and may be different than the information provided by WCHD because the state reports data for the entire county, which includes the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#).

Background Information

This report provides *preliminary* data on confirmed COVID-19 cases from August 4, 2021 – August 17, 2021. **A person is counted as a confirmed COVID-19 case if they had a positive confirmatory laboratory test (for example, polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAT) that detect genetic material of SARS-CoV-2, the virus that causes COVID-19). Antigen positive tests are counted as probable cases.**

Dates utilized for all graphs and tables are based on test result date and may not represent final reported case counts. Data may be underreported for recent days because results can take multiple days to be reported to the health department. This means the number of tests and percent positivity may change in next week's report. As this is a weekly report for the past 14 days, there will always be a week of overlap between reports.

*The COVID-19 data provided in this report is specific to the Winnebago County Health Department (WCHD) jurisdiction (population: 153,748). It does not include the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#). As of October 3, 2020, data reports from the Winnebago County Health Department do not include test results from residents in Wisconsin Department of Corrections facilities, which includes the Oshkosh Correctional Institute. This data can be found on the Wisconsin Department of Corrections [website](#).

Data provided on the [Department of Health Services website](#) may be different than information provided by WCHD because the state reports data for the entire county based on address, which includes those portions of Menasha and Appleton as well as the correctional facilities.
