Winnebago County Health Department School District Weekly Data Summary

August 20, 2020

Summary

- NEW this week: The age breakdown has changed slightly. We are now showing case counts & rates for the 15-17 and 18-19 age group separately.
- Currently in Winnebago County the burden of confirmed COVID-19 cases is high and the activity level is high.
- Case rates continue to remain high in Winnebago County. Our past 2-week confirmed case rate is 119.8 cases per 100,000 population, a decrease from the 134.1 per 100,000 reported last week.
- While testing percent positivity is at 3.8% for the past two weeks, the amount of testing remains inadequate. Not all persons with symptoms are able to get a test at this time and there are no permanent community testing sites available in Winnebago County.
- Fox Valley area hospitals have adequate capacity given the burden of disease in our community at this time. There was a slight increase from 23 COVID-19 patients hospitalized in the Fox Valley Area last week to 24 this week. As of August 18, there was 1 COVID-19 patient in the ICU.
- Disease investigation capacity is adequate. All confirmed cases are reached out to within 24 hours of being communicated to the health department.
- **Increased physical distancing and mask wearing are needed now to reduce case counts and decrease community spread. Keep your social circles small and avoid crowded indoor spaces.**

Background Information

This report provides preliminary data on the confirmed COVID-19 cases from August 5 – August 18, 2020 for school districts located within the Winnebago County Health Department (WCHD) jurisdiction. Dates utilized for all graphs and tables are based on test result date and may not represent final case counts. Data may be underreported for recent days because results can take multiple days to be reported to the health department. As this is a weekly report for the past 14 days, there will always be a week of overlap between reports.

The COVID-19 data provided in this report is specific to the WCHD jurisdiction (population: 154,379). It does not include the portions of the City of Menasha or City of Appleton that fall within Winnebago County as those areas fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#).

Rate is determined by # of new confirmed cases during the past two weeks divided by population in the school district geographic boundary multiplied by 100,000. Rates can fluctuate greatly with small population sizes like Omro and Winneconne making it difficult to call out high rates. **Small population data may be more effectively looked at in a trend wise fashion.**

Age Group Trended Over Time

The tables below show the biweekly confirmed cases counts by school district geographic boundary.

The graphs on the following pages show how case rates by age group have changed over time for Oshkosh and Neenah School District boundaries. The first graph on each page shows the biweekly confirmed case rates per 100,000 residents. The second graph shows the cumulative confirmed case rates. Cumulative case rates will always trend upward, it is the rate of increase in that trend that helps us understand what populations are being impacted the most. At this time, Omro and Winneconne will not have similar graphs due to small population size and small confirmed case counts in these geographic areas.

The school district geographic boundary was captured for confirmed cases starting June 10th and moving forward. Data on school district for earlier in the COVID-19 pandemic is not currently available for cases prior to June 10th.
