Health Department**

Winnebago County Health Department COVID-19 Weekly Data Summary

August 6, 2020

Summary

- Currently in Winnebago County the burden of confirmed COVID-19 cases is high and the activity level is high.
- Case rates continue to increase in Winnebago County. Our past 2-week confirmed case rate is 112.7 cases per 100,000 population, an increase from the 97.2 per 100,000 population case rate reported last week.
- Over the past two weeks, individuals aged 20-29 and 40-49 have the highest confirmed case rates.
- While testing percent positivity is currently below 5%, the amount of testing remains inadequate. Not all persons with symptoms are able to get a test at this time.
- Fox Valley area hospitals have adequate capacity given the burden of disease in our community at this time. Hospitalized COVID-19 patients have trended downward over the past week but are at the same level as two weeks ago. There was a decrease from 23 COVID-19 adult patients hospitalized in the Fox Valley Area last week to 15 this week. As of August 4, there were 3 COVID-19 patients in the ICU.
- Disease investigation capacity is adequate. All confirmed cases are reached out to within 24 hours of being communicated to the health department.
- **Increased physical distancing and mask wearing are needed now to reduce case counts and decrease community spread. Keep your social circles small and avoid crowded indoor spaces.**

Background Information

This report provides data on the confirmed COVID-19 cases from July 22 – August 4, 2020. Dates utilized for all graphs are based on test result date. Data may be underreported for recent days because results can take multiple days to be reported to the health department. This means the number of tests and percent positivity may increase in next week's report. As this is a weekly report for the past 14 days, there will always be a week of overlap between reports.

The COVID-19 data provided in this report is specific to the Winnebago County Health Department (WCHD) jurisdiction (population: 154,379). It does not include the portions of the City of Menasha or City of Appleton that fall within Winnebago County as those areas fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#). Data provided on the [Department of Health Services website](#) may be different than the information provided by WCHD because the state reports data for the entire county, which includes those portions of Menasha and Appleton.

Case Counts

- **Cumulative Case Counts (3/9/2020 – 8/4/2020)**
 - Confirmed Cases: 962
 - Active Cases: 127 (13% of cumulative cases)
 - Recovered Cases: 817 (85% of cumulative cases)
 - Probable Cases: 65
 - Negative Cases: 22,897
 - *Deaths: 17
- **Case Counts for the Past 14 Days (7/22/2020 – 8/4/2020)**
 - Confirmed Cases: 173
 - Probable Cases: 9
 - Negative Cases: 2,677
 - *Deaths: 1

**Death certificate must list COVID-19 (or the virus causing COVID-19) as a cause of death or a significant condition contributing to death. Healthcare providers and/or coroner determines cause of death.*

Case Count by Day – Last 2 Weeks

When there is adequate testing in place, trending daily case counts show if the disease is spreading or shrinking and what the overall burden of disease is in our area. This graph shows the number of confirmed cases by the test result date. There was an average of 12.3 cases per day, which was an increase from the 10.5 cases per day reported last week. Daily cases ranged from 7 to 24. For a full disease curve, see the [dashboard](#) on our [website](#).

Case Rates

- Burden: total number of cases per 100,000 residents in the last two weeks
 - Confirmed Case Rate for past two weeks (July 22- August 4)
 - 112.7 cases per 100,000 population
 - *High burden*
 - Confirmed Case Rate for previous two weeks (July 15- July 28): 97.2 per 100,000 population

Burden Status	Case Rate per 100,000 residents in the past two weeks	Number of Cases in the past two weeks
Low	Case rate is less than or equal to 10.	Less than 15 cases
Moderate	Case rate is greater than, but less than or equal to 50.	Greater than 15 cases, but less than or equal to 77 cases.
Moderately High	Case rate is greater than 50, but less than or equal to 100.	Greater than 77 cases, but less than or equal to 154 cases.
High	Case rate is greater than 100.	Greater than 154 cases.

- Trajectory: Percent change in number of confirmed cases from previous to current week
 - Growing
- Activity: summary indicator based on the burden and trajectory
 - High

Biweekly Case Rate Trends

The graphs below show confirmed case rate per 100,000 people for the Winnebago County Health Department Jurisdiction. These case rates are based on confirmed case counts during a two-week time span.

Amount of Testing and Percent Positivity

Adequate testing capacity and utilization is necessary for identification of active infections of COVID-19. Only through identification of cases may they be investigated to help prevent spread to others. Higher disease activity requires more testing to find enough cases in order to slow the spread. The percent positivity helps determine if adequate testing is being performed. When percent positivity is high, testing needs to increase to help identify more active infections. Our current goal is to have enough testing to keep the percent positivity below 5%.

An average of 3.2% of tests were positive, which is an increase from the 2.7% average percent positivity reported last week. Daily positivity ranged from 2.1% to 5.4%. An average of 398 tests were conducted each day, which is a decrease from the average of 413 tests per day reported last week.

Trending by Age Group

This graph shows how cumulative confirmed case rates by age group have changed over time. Cumulative case rates will always trend upward, it is the rate of increase in that trend that helps us understand what populations are being impacted the most. In this case the 20-29-year-old population has had a much higher rate of increase compared to other age groups. The cumulative case rate among the **20-29 age group is 2.1 times higher** than the next highest age group's cumulative case rate.

This table shows the case count and case rate by age group for the past two weeks and cumulatively. Over the past two weeks, **individuals aged 20-29 and 40-49 have had the highest confirmed case rates.**

Age Group	Past Two Weeks (7/22/20-8/4/20)			Cumulative Confirmed Case Count	Population**
	Case Count	Case Rate (per 100,000)	Percent of Cumulative Cases in that age group		
<20	22	61.3	22.7%	97	35,871
20-29	42	172.9	11.8%	356	24,297
30-39	26	134.9	19.5%	133	19,273
40-49	28	153.3	21.1%	133	18,269
50-59	18	78.9	17.5%	103	22,826
60+	38	117.4	26.0%	146	32,359

** Age Group Population Data comes from the [2018 census](#). Total Population size across all age groups differs slightly from total population size used to calculate Winnebago County Health Department jurisdiction case rate (154,379) which was determined using 2019 population data from the [WI Department of Administration](#).

Healthcare Measures for the Fox Valley Area

The Fox Valley Area HERC Region includes Calumet, Green Lake, Outagamie, Shawano, Waupaca, Waushara and Winnebago Counties.

It is vital that healthcare systems have adequate capacity to manage patient care in the context of a surge caused by COVID-19. Through adequate testing, case identification and investigation we can help keep case counts at levels that are manageable by our healthcare systems. When health care systems exceed their capacity the ability to treat severe illness is compromised and patients do worse and/or don't get the care they need to survive the illness. As of 8/4/2020, there are **15 COVID-19 adult patients hospitalized** in the Fox Valley Area with **3 of those patients in the ICU**. To view more information on healthcare measures in the Fox Valley Area and across the state, please visit <https://www.wha.org/COVID19Update>

Burden, Trajectory, and Activity Level Across Wisconsin in Past 14 Days

Updated 8/5/2020

The Wisconsin Department of Health Services classifies regions and counties as high, medium, or low activity levels for COVID-19 spread by combining the case burden (case rate) and trajectory (change in cases over time) indicators. The state updates this information weekly on Wednesdays at 2 p.m. As of August 5, 2020, Winnebago County*** and the Fox Valley Region are both classified as having a **high COVID-19 activity level**. To view more information on these metrics, please visit <https://www.dhs.wisconsin.gov/covid-19/local.htm>

☒ High

COVID-19 activity level

Highlight area

Highlight Area

Click on a county or region on the map to filter data below.

County: Winnebago
COVID-19 Activity Level: High

Burden (case rate), trajectory (percent case change), and activity level

Area	Count	Burden	Trend	Activity level
Winnebago	210	124	High	High
Fox Valley Area	874	160.3	High	High

A trajectory of N/A means there was no significant change in the percent change in cases for this week compared to the previous week.

***This data is provided by the [Department of Health Services](#) and may be different than the information provided by WCHD because the state reports data for the entire county, which includes the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#).
