Prevent. Promote. Protect.

**Winnebago County
Health Department**

Winnebago County Health Department COVID-19 Weekly Data Summary

September 9, 2021

COVID deaths and hospitalizations are increasing. Get vaccinated & wear a mask.

Summary

- Due to a [high level](#) of community transmission of COVID-19 in Winnebago County, **the health department strongly [recommends](#) that everyone, vaccinated and unvaccinated, [wear a mask](#) in public indoor settings and crowded outdoor venues.**
- The Delta variant has led to more COVID-19 infections, hospitalizations and deaths – and the unvaccinated are most at risk. Vaccination provides the best protection against the highly contagious Delta variant. If you are unvaccinated, continue to wear a mask, social distance and [make a plan to get vaccinated](#). If you are vaccinated, you still may bring the Delta variant home to unvaccinated or immune suppressed family and friends. Protect yourself, family and friends by [encouraging vaccination](#) and wearing a mask.
- Schools are a high risk setting with the Delta variant circulating. To help keep schools open, have your child wear a mask, stay home when ill, and [test](#) after an exposure to COVID-19 or someone who is ill. If your child is ill or has been exposed to COVID-19, keep all other children in your household home as well.
- The Pfizer COVID-19 vaccine has been proven [safe and effective](#) with [full FDA approval](#) for the prevention of COVID-19 disease in people 16 years of age and older and is still authorized for use in those 12-15 years of age. Read answers to the most common questions families have about the vaccine [here](#).
- Employers should implement multi-layered interventions to protect workers and mitigate the spread of COVID-19. Employers considering policies that require employees to get vaccinated can find additional guidance from the U.S. Department of Justice [here](#).
- Situational Awareness:
 - The confirmed + probable case burden is **very high** for our jurisdiction. The confirmed + probable case rate over the past 2 weeks for our jurisdiction is 457.9 **cases per 100,000 people**, an increase from the 433.2 cases per 100,000 reported in last week's report.
 - Over the past two weeks, we have reported a total of 704 confirmed + probable cases, a **5% increase** compared to the 666 confirmed + probable cases reported in last week's report.
 - There are at least 558 PCR tests being performed every day in our jurisdiction, and this is trending upwards.
 - Over the past two weeks, 7.2% of PCR tests were positive in our jurisdiction. The percent positivity has continued to increase each week since our lowest point in mid-June.
 - There are currently [70 COVID-19 patients hospitalized](#) in Fox Valley Area hospitals. New evidence is emerging that the Delta variant may produce 30-50% higher hospitalization rates than previous variants. Due to the latest surge, hospitals in the Fox Valley region are nearing capacity for staffed hospital beds, including ICU beds. Over the summer, hospitalizations due to COVID-19 were the lowest they had been since the start of the pandemic, dropping all the way down to zero hospitalizations on July 9. Hospitalizations have now increased significantly over the past two months, and have almost tripled in the past month.
- Current COVID-19 activity level is indicated as **very high** for Winnebago County based on a very high burden status over the past two weeks. **As long as the virus is still circulating, children under the age of 12 and all other unvaccinated individuals are at a higher risk of getting COVID-19.**
- With the current surge in positive tests, our ability to do contact tracing is strained. Only the *highest risk close contacts* are being contacted directly by public health – we are asking [people that test positive](#) for COVID-19 to [reach out to all other close contacts](#) themselves.
- Vaccines are available any day of the week at a [site near you](#). Visit [www.wcvaccine.org](#) to find answers to your questions about the vaccine and see where you can get vaccinated. Get your first dose before September 20 and [get \\$100!](#)
 - 62.4% of Winnebago County residents aged 12 or older have received at least one dose of the COVID-19 vaccine.
 - Everyone [12 and older](#) is eligible to receive the COVID-19 vaccine. *Pfizer is the only vaccine currently approved for 12- to 17-year-olds. Check [vaccine locations](#) before you go if you need or want a specific vaccine brand.*
- COVID-19 testing remains an important tool in reducing spread of the virus to others. Whether you are vaccinated or unvaccinated, get a COVID-19 test if you have symptoms, were exposed to the virus, or feel you need a test. Knowing helps you protect others. Even if you have no symptoms or mild symptoms, you can infect others.
 - The CDC encourages widespread testing to identify asymptomatic cases to avoid the spread of COVID-19.
 - [Sunnyview Expo Center](#) PCR test results currently take approximately 3 days. [Visit our website](#) for a full list of testing locations in Winnebago County.
- **To view monthly totals for cases since March 2020, view the latest [Trend Weekly Data Summary](#).**

COVID-19 Vaccination Data

As of 9/8/2021, **6,034,473 doses** of the [COVID-19 vaccine](#) have been administered to Wisconsin residents with 55.4% of the Wisconsin population having received at least one dose of the COVID-19 vaccine and 52.0% of the Wisconsin population have completed the vaccine series.

As of 9/8/2021, **171,840 doses** of [COVID-19 vaccine](#) have been administered to Winnebago County residents with 54.0% of the county population having received at least one dose of the COVID-19 vaccine and 50.7% of the county population have completed the vaccine series. Of Winnebago County residents aged 12 or older, 62.4% have received at least one dose of the COVID-19 vaccine.

Cumulative and Weekly Number of COVID-19 Vaccine Doses Administered to Winnebago County Residents (12/16/2020-9/7/2021)

This table shows the number and percent of Winnebago County residents who have received at least one dose of the COVID-19 vaccine by demographic breakdown. Data will differ slightly from what is posted on the [DHS website](#) due to differences in population estimates used and because the data is extracted at a different time of day.

		Number	Percent	Population*			Number	Percent	Population*
Ethnicity	Hispanic or Latino	2,861	40.8%	7,017	Sex	Female	48,980	57.9%	84,556
	Not Hispanic or Latino	86,240	52.8%	163,394		Male	42,790	49.8%	85,855
	Unknown	2,891				Unknown	222		
Race	American Indian or Alaska Native	471	46.6%	1,010	Age Group	12-15	3,607	45.2%	7,974
	Asian	2,795	58.9%	4,748		16-17	2,068	50.4%	4,103
	Black or African-American	1,251	32.3%	3,874		18-24	7,117	34.7%	20,491
	Native Hawaiian or Other Pacific Islander	106	82.2%	129		25-34	11,469	51.1%	22,442
	Other Race	5,105	99.9%**	4,291		35-44	12,638	62.7%	20,144
	White	78,701	50.3%	156,359		45-54	13,183	58.9%	22,390
	Unknown	3,563				55-64	17,151	75.1%	22,846
						65-74	14,516	96.5%	15,050
				75+	10,242	85.6%	11,964		
				12+	91,991	62.4%	147,404		

*Age Group Population Data comes from the [2019 census](#). Population sizes used in this table are for all of Winnebago County, not just the jurisdiction of Winnebago County Health Department. Population sizes will differ from population sizes used elsewhere in these reports.

** The metric for percent of population vaccinated has been capped at 99.9%. These metrics could be greater than 99.9% for multiple reasons, such as census denominator data not including all individuals that currently reside in the jurisdiction, differences in racial category classification, etc.

Reported Case Counts

	Case Counts for the Past 14 Days 8/25/2021-9/7/2021	Cumulative Case Counts 3/9/2020-9/8/2021
Confirmed Cases	565	16,717
Active Cases		536 (3% of cumulative cases)
Recovered Cases		16,008 (96% of cumulative cases)
Probable Cases	139	3,234
Negative Cases	1,709	97,715
Deaths**	5	201
Among Confirmed Cases	5	176
Among Probable Cases	0	25

**Death certificate must list COVID-19 (or the virus causing COVID-19) as a cause of death or a significant condition contributing to death. Healthcare providers and/or coroner determines cause of death. Data includes COVID deaths among PCR confirmed cases and probable cases.

Case Count by Day – Last 2 Weeks

When there is adequate testing in place, trending daily case counts show if the disease is spreading or shrinking and the overall burden of disease in our area. This graph shows the number of confirmed cases by test result date and probable cases by the date their case file was created. **There was an average of 50.3 confirmed and probable cases per day, which is an increase from the 47.6 confirmed and probable cases per day reported last week. Total daily confirmed and probable case counts ranged from 21 to 69 cases.** There was an average of 40.4 confirmed cases per day, which is an increase from the 37.4 cases per day reported last week. There was an average of 9.9 probable cases per day, which is a decrease from the 10.1 probable cases per day reported last week. The trend line shows the 7-day average for the combined total of confirmed and probable cases. For a full disease curve, see the [dashboard](#) on our [website](#).

Daily confirmed case counts presented here may differ from our situation update and the cases by day graph reported on our dashboard. This chart reflects the test result date instead of the date when the results are actually received by the health department.

A person is counted as a confirmed COVID-19 case if they had a positive test result using a confirmatory diagnostic test that detects the genetic material of SARS-CoV-2, the virus that causes COVID-19 (polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAT)). Reasons a person could be counted as a probable case include: a positive antigen test, positive antibody test, or diagnosis due to symptoms and known exposure to COVID-19.

Burden Status

Burden status is the total number of reported cases per 100,000 residents in the last two weeks.

Dates	Confirmed Cases	Probable Cases	Total (Confirmed + Probable)
8/25-8/31	253	70	323
9/1-9/7	312	69	381
Total for last two weeks	565	139	704
Case rates for last two weeks (per 100,000 population)	367.5	90.4	457.9

Burden Status	Case Rate per 100,000 residents in the past two weeks	Number of Cases in the past two weeks
Low	Case rate is less than or equal to 10.	Less than 15 cases or about 1 case per day.
Moderate	Case rate is greater than 10, but less than or equal to 50.	Greater than 15 cases, but less than or equal to 77 cases or less than 6 cases per day.
Moderately High	Case rate is greater than 50, but less than or equal to 100.	Greater than 77 cases, but less than or equal to 154 cases.
High	Case rate is greater than 100, but less than or equal to 350.	Greater than 154 cases, but less than or equal to 538 cases.
Very High	Case rate is greater than 350, but less than or equal to 1,000.	Greater than 538 cases, but less than or equal to 1,537 cases.
Critically High	Case rate is greater than 1,000.	Greater than 1,537 cases.

Case rate is determined by number of new confirmed cases in a particular group (such as an age group) during the past two weeks, divided by the population of that particular group, multiplied by 100,000. View the [DHS COVID Local Activity Level](#) page to learn more about burden status.

Biweekly Confirmed & Probable Case Rate Trends

The graphs below show confirmed case rate per 100,000 people and the confirmed + probable case rate per 100,000 people for the Winnebago County Health Department Jurisdiction. These case rates are based on confirmed and probable case counts during a two-week time span.

Amount of Testing and Percent Positivity

Adequate testing capacity and utilization are necessary for identification of active infections of COVID-19, and investigations into those positive cases helps prevent the spread of the virus. Higher disease activity requires more testing to identify and isolate enough infected people to slow the spread. The percent positivity helps determine if there is adequate testing. A high percent positivity may indicate an inadequate amount of testing, which limits the number of identified cases and subsequent contact tracing used to help reduce the spread of the virus. Our current goal is to have enough testing to keep the percent positivity below 5%. View the [DHS COVID Local Activity Level](#) page to see percent positivity for the state, counties, and regions.

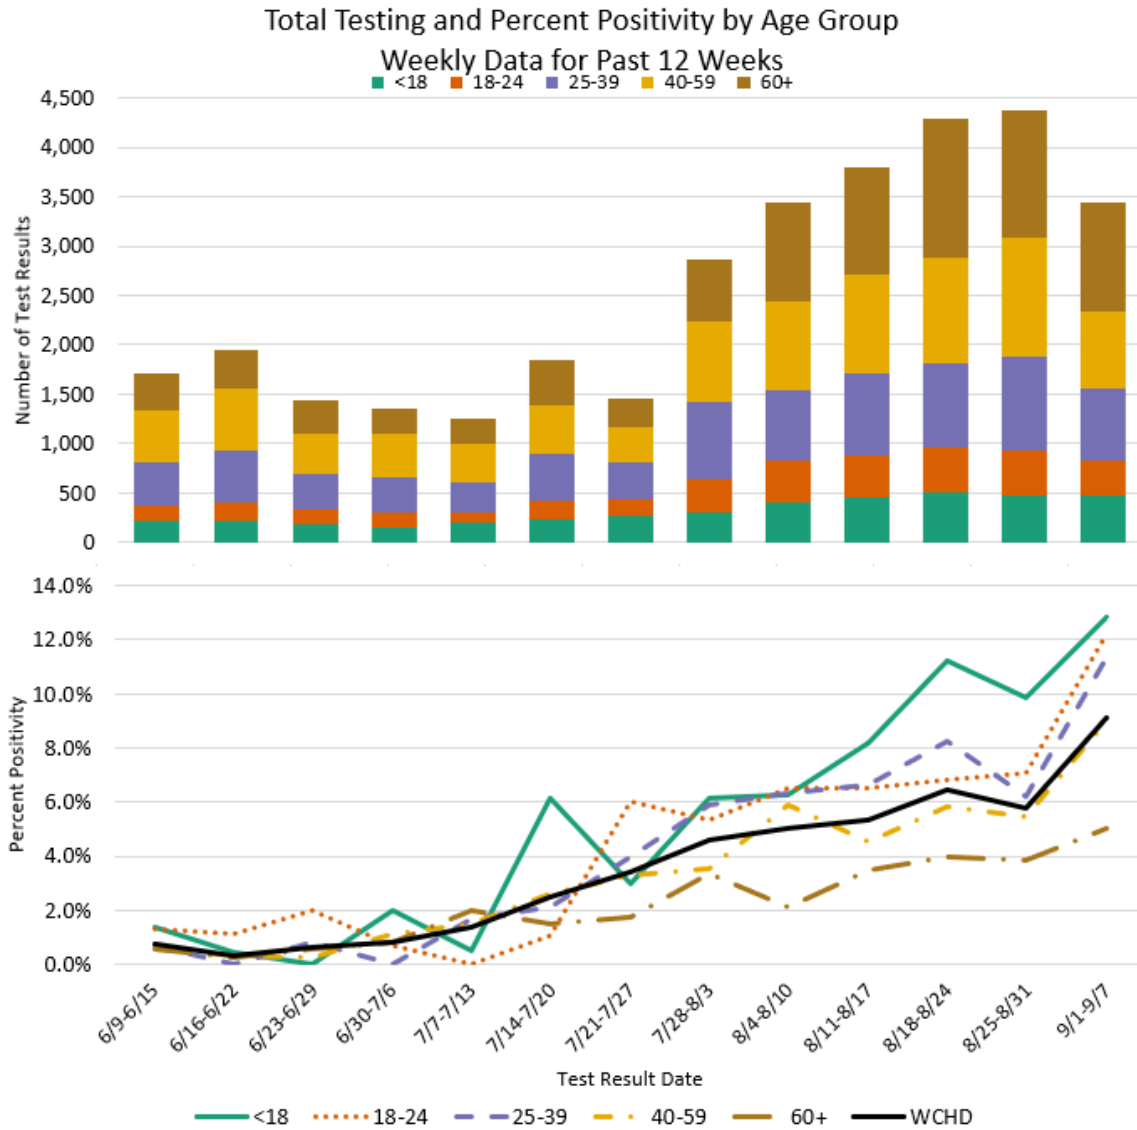

Over the past two weeks, **7.2% of PCR tests were positive**, which is an increase from the 6.3% positivity reported last week. Daily positivity ranged from 4.4% to 14.4%. Over the past two weeks an **average of 558 PCR tests** were conducted each day among residents within the Winnebago County Health Department jurisdiction. Antigen tests are not included in the testing numbers or the percent positivity calculation. A PCR confirmed case is only counted once in the percent positivity calculation, meaning a person with multiple positive PCR tests only counts as one confirmed case.

[Testing](#) is available at the [regional COVID-19 testing site](#) at Sunnyview Expo Center in Oshkosh as well as other locations including [CVS pharmacies](#) and multiple community test sites in [Oshkosh](#), [Neenah](#), and [Appleton](#).

Amount of Testing and Percent Positivity by Age Group

The figures below show the percent positivity and total testing numbers by age group. Antigen tests are not included in the testing numbers or the percent positivity calculation. A PCR confirmed case is only counted once in the percent positivity calculation, meaning a person with multiple positive PCR tests only counts as one confirmed case. Over the past week, individuals aged <18 had an 12.8% positivity rate and individuals aged <18 had the lowest testing rate (1,293 tests per 100,000 individuals aged <18). Over the past week, **9.1% of PCR tests were positive** in our jurisdiction, which is an increase from the 6.1% positivity reported for the previous week (8/15-8/31).

9/1-9/7	<18	18-24	25-39	40-59	60+	Total
Percent Positivity	12.8%	12.2%	11.3%	9.0%	5.0%	9.1%
Testing Rates per 100,000 population	1,293	1,884	2,421	2,183	3,381	2,247
Number of Tests	476	360	714	790	1,094	3,435
Population	30,928	19,108	29,405	41,095	32,359	152,895

Trending by Age Group

This graph shows how cumulative confirmed case rates by age group have changed over time. Cumulative case rates will always trend upward; it is the rate of increase in that trend that helps us understand what populations are being impacted the most.

This table shows the case count and case rate by age group for the past two weeks and cumulatively.

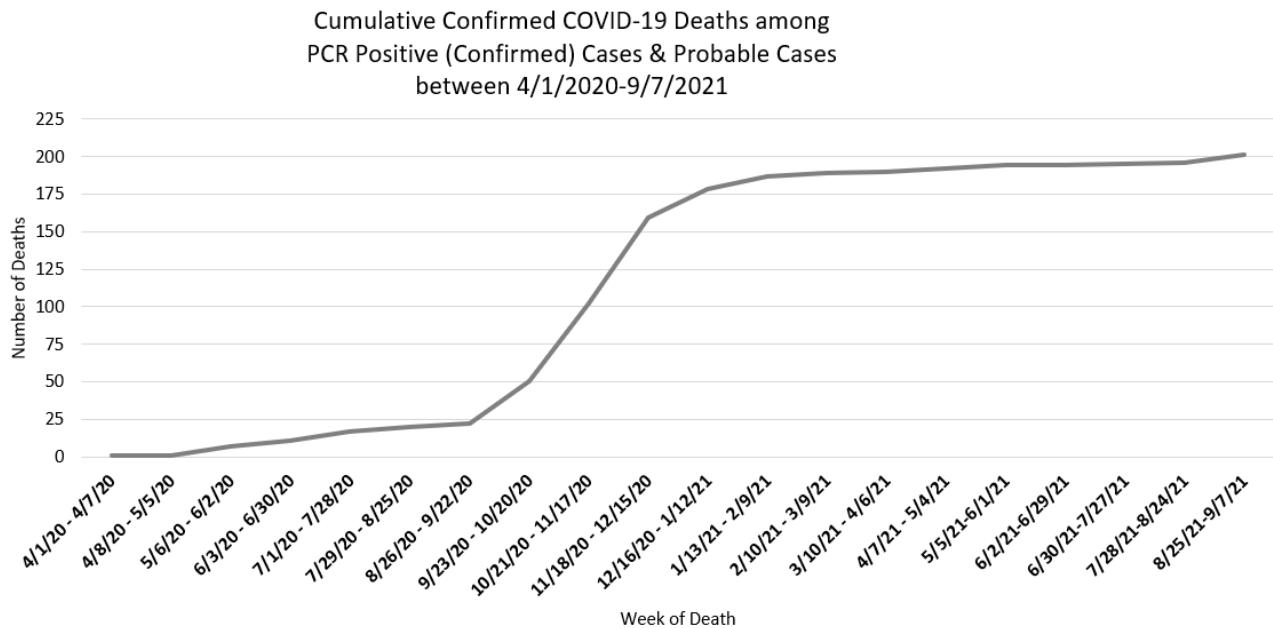

Age Group	Past Two Weeks (8/25/21-9/7/21)		Cumulative Confirmed Case Count	Population***
	Case Count	Case Rate (per 100,000)		
<18	107	346.0	1,935	30,928
18-24	77	403.0	2,601	19,108
25-29	51	503.4	1,506	10,132
30-39	88	456.6	2,611	19,273
40-49	69	377.7	2,176	18,269
50-59	68	297.9	2,565	22,826
60+	105	324.5	3,316	32,359

***Age Group Population Data comes from the [2018 census](#). Total Population size across all age groups (152,895) differs slightly from total population size used to calculate Winnebago County Health Department jurisdiction case rate (153,748) which was determined using 2020 population data from the [WI Department of Administration](#).

Confirmed COVID-19 Deaths

Confirmed COVID-19 deaths include deaths among PCR confirmed cases and probable cases. Confirmed COVID-19 deaths have a death certificate that lists COVID-19 disease or SARS-CoV-2 as a cause of death or a significant condition contributing to death. Healthcare providers or medical examiners/coroners determine cause of death. Public reporting of COVID-19 deaths lag while waiting for confirmation.

In the graph below, the data for recent weeks is preliminary and subject to change. Recent deaths are still pending as we await confirmation on cause of death.

These tables show case counts for confirmed COVID-19 deaths by age group and housing type, as well as by ethnicity, race, and sex.

All Confirmed COVID-19 Deaths by Age Group and Housing Type					
Age Group	Not Group	LTCF/ Group	Total Deaths	Rate per 100,00	Population
<50	5	0	5	5.1	97,710
50-59	17	1	18	78.9	22,826
60-69	22	7	29	175.9	16,491
70-79	31	14	45	469.0	9,594
80-89	36	31	67	1,657.6	6,274
90+	9	28	37		
Total	120	81	201	131.5	152,895

All Confirmed COVID-19 Deaths by Ethnicity, Race, and Sex		
Ethnicity	Hispanic/Latino or Unknown	12
	Not Hispanic/Latino	186
Race	Other or Unknown	14
	White	184
Sex	Female	80
	Male	118

Long-term care facility (LTCF): nursing homes, assisted living facilities

Group housing facility: Group housing facilities include city and county jails, homeless shelters, dormitories and group homes. Deaths among those living in Wisconsin Department of Corrections facilities (including Oshkosh Correctional Institute) are not included here.

Not group housing facility: single family homes, apartments, condos, duplexes or townhouses

Healthcare Measures for the Fox Valley Area

The Fox Valley Area HERC Region includes Calumet, Green Lake, Menominee, Outagamie, Shawano, Waupaca, Waushara and Winnebago Counties.

It is vital that healthcare systems have adequate capacity to manage patient care in the context of a surge caused by COVID-19. Through adequate testing, case identification and investigation we can help keep case counts at levels that are manageable by our healthcare systems. When healthcare systems exceed their capacity, the ability to treat severe illness is compromised and patients do worse and/or do not get the care they need to survive the illness.

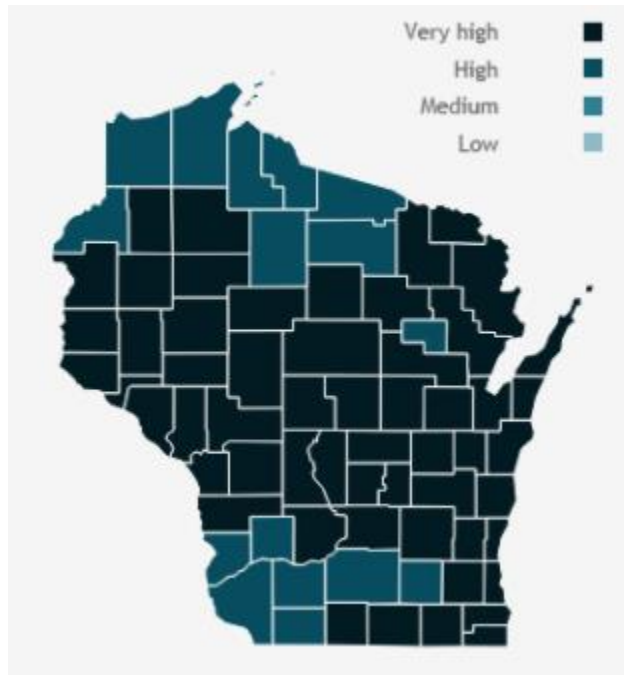

As of 9/8/2021, there were **70 COVID-19 patients hospitalized** in the Fox Valley Area hospitals with 11 of those patients in the ICU.

To view more information on healthcare measures in the Fox Valley Area and across the state, please visit <https://www.wha.org/COVID19Update> and <https://www.dhs.wisconsin.gov/covid-19/hosp-data.htm>

Burden, Trajectory, and Activity Level Across Wisconsin in Past 14 Days

Updated 9/8/2021

The Wisconsin Department of Health Services classifies regions and counties as critically high, very high, high, medium, or low activity levels for COVID-19 spread by combining the case burden (case rate) and trajectory (change in cases over time) indicators. The state updates this information weekly on Wednesdays by 5 p.m. As of September 8, 2021, Winnebago County**** and the Fox Valley Region were classified as having a **very high COVID-19 activity level**.

To view more information on these metrics, please visit <https://www.dhs.wisconsin.gov/covid-19/local.htm>

Area	Confirmed + Probable Case Count (Past 14 days)	Burden	Trajectory	Activity Level	Percent Positive (Past 7 Days)
Winnebago	805	475.4 Very High	N/A ↔	Very High ■	9.1%
Fox Valley Area	2,599	476.5 Very High	N/A ↔	Very High ■	8.5%
Outagamie	903	491.3 Very High	N/A ↔	Very High ■	8.4%
Wisconsin	26,785	463.3 Very High	N/A ↔	Very High ■	8.5%

A trajectory of N/A means there was no significant change in the percent change in cases for this week compared to the previous week.

****This data is provided by the [Department of Health Services](#) and may be different than the information provided by WCHD because the state reports data for the entire county, which includes the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#).

Background Information

This report provides *preliminary* data on confirmed COVID-19 cases from August 25, 2021 – September 8, 2021. A person is counted as a **confirmed** COVID-19 case if they had a **positive confirmatory laboratory test** (for example, polymerase chain reaction (PCR) tests or nucleic acid amplification tests (NAAT) that detect genetic material of SARS-CoV-2, the virus that causes COVID-19). Antigen positive tests are counted as **probable** cases.

Dates utilized for all graphs and tables are based on test result date and may not represent final reported case counts. Data may be underreported for recent days because results can take multiple days to be reported to the health department. This means the number of tests and percent positivity may change in next week's report. As this is a weekly report for the past 14 days, there will always be a week of overlap between reports.

*The COVID-19 data provided in this report is specific to the Winnebago County Health Department (WCHD) jurisdiction (population: 153,748). It does not include the portions of Winnebago County that fall within the jurisdiction of the [City of Menasha Health Department](#) and [City of Appleton Health Department](#). As of October 3, 2020, data reports from the Winnebago County Health Department do not include test results from residents in Wisconsin Department of Corrections facilities, which includes the Oshkosh Correctional Institute. This data can be found on the Wisconsin Department of Corrections [website](#).

Data provided on the [Department of Health Services website](#) may be different than information provided by WCHD because the state reports data for the entire county based on address, which includes those portions of Menasha and Appleton as well as the correctional facilities.
