

I'VE BEEN EXPOSED TO COVID-19, BUT I DO NOT HAVE SYMPTOMS. WHEN SHOULD I GET TESTED?

Continue to be cautious after you complete your quarantine. Wear a mask, avoid gatherings and wash your hands frequently.

TOO EARLY TO TEST

BEST TIME TO TEST

LAST EXPOSURE TO COVID-19

**DAY 6/7
GET TESTED FOR EARLY RELEASE FROM QUARANTINE**

CONSIDERATIONS:

- If you live with someone who has COVID-19, your **last exposure** to the virus would be on the day they finish their isolation.
- If you develop symptoms at any time, isolate from others and get tested.
- A negative test result indicates that you did not have COVID-19 at the time of testing. COVID-19 could still develop during the 14 day period after exposure, so continue to take steps to protect yourself and others. If you test positive, follow the [isolation guidelines](#) provided by the Winnebago County Health Department.

Public Health
Prevent. Promote. Protect.
